

CIL Subsidiary wise Target vis-a-vis achievement of Biological Reclamation upto March, 2018 (as on 31.03.2018)

Company	Target for the Financial Year 2017-18	Target Achieved. During Financial Year 2017-18 Ha	Biological Reclamation break upto March, 2018 during Financial Year 2017-18			Remarks why Target not achieved for the Financial Year 2017-18	Biological Reclamation		
			In Excavated Area	In External OB dump	In other Areas (Colony, Avenue, sidings etc.) in mine lease area		Target till March, 2018 Ha	Achieved till March, 2018. Ha	% Completed wrt target upto March, 2018
North Eastern Coalfields	3.5	0.5	Nil	In External OB dump	Nil	Due to non participation of Bidder in Tendering process.	3.5	0.5	14.29
CIL									

NB:1. All figures are indicated in Ha. and reports are to be filled in Ha. Only.

2. However, we are doing the gap filling plantation in mines.

3. For Biological reclamation NEC has floated a tender for 3.5 Ha. at reclaimed OB dump for 8750 Nos. of saplings of local species. However, due to non participation of any tenderer, the job had been retendered. The Re-tendered tender is opened and 3 bidders participated in the Tender. It is under deliberation stage.

However, Vetiver (**Scientific name Vetiveria Zizanioides L Nash**) also known as Khas-Khas Grass which has different advantages qualities like fast growing, high threshold limit against toxicity, extensive root system etc. is used as a soil stabilizer in OB slopes.

NEC is reclaiming the OB dump slope of Tirap OCP with 65,000 Nos. vetiver seedlings prepared by Central Nursery, Margherita.
